

Automated Electrical Power Design System for Residential Buildings

Design Tier

Choose your preferred design tier

Cost-Effective

Cost-Effective: Minimum compliant sizing - lowest upfront cost, no extra headroom.

 Overview

 Appliances

 Lighting

 Backup Power

 Cable & Results

How this works

AutoElect calculates the electrical load for a residential building and recommends a suitable main cable size, in line with BS 7671:2018 and CIBSE guidance.

Project name (used on the PDF report)

ADEYEMI OPEYEMI RESIDENTIAL HOUSE SANGO

1. **Appliances** — tick off what's in the building
2. **Lighting** — enter each room's type and area
3. **Backup Power** — set your backup preferences (location, battery type, duration)
4. **Cable & Results** — set the cable run length and calculate

Fill in the Appliances, Lighting, and Backup Power tabs first, then head to Cable & Results to run the calculation.
